

TERENCE WAFULA

My name is Terence Wafula. I was born on 5 August 2007. I come from a family of eight children and I am the fourth born. Our parents, Evans Wafula and Alice Wafula are both alive. They are sugarcane farmers on 1½ acres of land our family owns. I help them to weed the crops when am not in school. They are unable to provide for the big family size because of the fees burden since they already pay for my three siblings in high

school. It is hard for them to pay fees for they lack a promising source of income. My mother is a housewife and dad is the only breadwinner in our home. On days that he fails to get anything from his struggles, we go hungry.

I started my education at Testimony Academy from Grade 1 to Grade 8, where I did my Kenya Certificate for Primary Education (KCPE) exam in 2020 and scored 368 marks. It was a performance worth thanking God for everything since I worked tooth and nail. With His help, I scored good marks. I liked reading storybooks and novels, a lot because I wanted to improve my creativity. I hate lazy unproductive people who like jokes every time. I enjoyed studying reading Mathematics and Science, which I was able to pass highly. I am talented at

playing musical instruments like the guitar during my free time.

On July 26 2021, I joined Living Hope High School (LHHS). I could not hold back my joy of joining this school. The teachers, students, and staff were welcoming, all of which my parents had been told about by several graduates of the school. It is indeed a good place for needy students like myself. The performance of the school also got my parent's attention. The school records excellent results. We visited the school with my father and the school principal gave us a warm welcome. We were glad to receive the admission letter to join the school with the good facilities from which I am sure to achieve good grades.

I want to become an Electric Engineer when I complete my studies. My love for electronics is what spurs my interest in the Electrical Engineering field. I want to study how power is generated and transmitted. With good grades in Mathematics and Science, I know I will be able to study Bachelor of Science in Electrical Engineering at the college. It is not a possible dream to achieve on my own. I will require the support of necessary resources to attain my goals. I am writing to request sponsorship from able and willing good people. Please be my sponsor.

Yours sincerely,

Terence Wafula.
